SUMMARY

Fullstack software engineer with 3 years of experience shipping production web and mobile products in TypeScript. I build data-heavy platforms end to end: from Postgres schemas and REST APIs to React and React Native interfaces. I've built dashboards that handle datasets of over 2 million records, integrated video and real-time features across web and mobile, and delivered client products at Matte Design Agency from scoping through deployment. Comfortable working async with distributed teams, with full working-hours overlap with the UK and Europe.

SKILLS

Frontend & mobile: TypeScript, JavaScript, React, Next.js, React Native (Expo), Tailwind CSS, TanStack Query, Redux, GSAP, Three.js, Figma

Backend & data: Node.js, Express, PostgreSQL, Prisma, Supabase, Neon, REST APIs, JWT authentication, webhooks, real-time sync

Infrastructure & tooling: Docker, Git/GitHub, Vercel, Postman, ESLint, CSV data pipelines (Papa Parse)

Web3: Solidity, Hardhat (testing), Viem, Wagmi

EXPERIENCE

Schull Technologies | Remote *Feb 2026 – Present*
Fullstack Software Developer

- **Lead developer** on the admin and organiser dashboard of an AGM (Annual General Meeting) platform for a Nigerian securities firm, covering event setup, live sessions, e-voting and proxies, KYC, audit logs and role-based team permissions.
- Built register management for shareholder registers of up to **2M+ records**: server-side pagination, debounced URL-synced search across name, email, phone and CHN, and CSV bulk import with row-level validation, preview and append or replace modes.
- Integrated Zoom into the dashboard: Next.js API routes for SDK signatures, ZAK tokens, waiting rooms and session control, plus a managed pool of host accounts for concurrent meetings.
- Contributed to the companion **React Native (Expo)** app, helping integrate the **Zoom Meeting SDK** including the native Android setup.
- Built **The Energy Vanguard** full stack: Next.js frontend and REST APIs with Node.js, PostgreSQL, Prisma and Supabase, with real-time sync and webhooks to keep the app updated live, containerised with Docker.

Crafwell Engineering | Port Harcourt *Jan 2024 – Sep 2025*
Frontend Software Developer

- Built and maintained web applications in React, TypeScript, Next.js and Tailwind CSS.
- Built reusable, component-driven UI that sped up delivery and kept design consistent across projects.
- Improved performance and accessibility across devices.
- Worked in an Agile team: sprint planning, stand-ups and code reviews.

Matte Design Agency (mattedsgn.com) | Lagos *2025 – Present*
Software Engineer

- Build websites, dashboards and backend systems for agency clients in fintech, education, food delivery and the non-profit sector, from scoping through deployment.
- Built **Lead Radar**, the agency's internal outreach console for managing and tracking leads (Next.js, deployed on Vercel).
- **Brillianda (in development):** building the backend for a multi-tenant, enterprise school management platform designed to scale to 1M users, with custom authentication and planned SAML SSO/SCIM (PostgreSQL on Neon, AWS).

- **RouteLink Microfinance Bank:** built the bank's website and web app UI in Next.js and Tailwind, including dashboard pages, forms, account-opening flows and a privacy-compliant cookie notice.
- **RoutePay (routepay.com):** built the fintech company's corporate and marketing sites from Figma designs, focused on load speed and responsiveness.
- Also delivered sites for Crafwell Engineering (GSAP animations), YouMeHungry (food delivery), Global Harvest Church and the HerRising initiative.

PROJECTS

DeFi Liquidation Shield *Solidity · React · Viem · Wagmi · Kwala*

- Event-driven risk monitor for DeFi lending positions: a Solidity contract classifies each position's health on-chain (safe, warning, critical) and fires instant Telegram alerts through Kwala workflows, with no backend server.
- Contract hardened with reentrancy guards and overflow protection, covered by 40+ passing Hardhat tests.

EDUCATION

University of Nigeria | Enugu *2019 – 2024*
B.Eng., Metallurgical & Materials Engineering

- Final-year research on how carburization affects the microstructure, mechanical properties and corrosion resistance of mild steel; numerical analysis and technical report writing.
